

Job Details

To access a job shift's settings, select a current job on the dashboard and click 'View' to access the Job Details page. From the Job Details page, administrators, managers, and foreman can click the 'Settings' tab at the top right to access the Job Shift Settings.

Job Shift Settings

The Job Shift Settings panel allows users to enter or update the shift's target tons, update the load operator, and update the job foreman.

Update Deliver Location

[USE MY LOCATION](#)

Use My Location

To set or update the shift's deliver location, click Use My Location in the field to add your current GPS location to the shift. Job routing will be updated within 1 minute after using this feature.

Performance Settings

The Performance Settings panel allows users to add or change the deliver and return time adjustments based on field conditions.

These settings are used to control when bounce back progress bars start to appear and each truck's performance score.
