

Overview

After logging in to SOP, users can select a current job shift on the dashboard and click the View button to access more information and interact with the job shift and loads.

Summary View

After clicking View, users will be directed to the Summary View. The Summary View includes information about the job, mix, target, progress, and locations.

Summary Delivering Returning Settings

---	--	--	--

Delivering and Returning View

Using the buttons at the top of the Job Shift view, users can select Delivering or Returning to view a list of trucks currently delivering material to the job or returning to the plant.

All Loads

The All Loads button will direct users to complete list of loads on the shift, including closed loads. From the All Loads view, users can export the load tickets to CSV or PDF. Some users have an All Loads button in their top navigation, while others can click 'All Loads' at the bottom of the Delivering and Returning lists.

Progress Bars

The Delivering and Returning views include a list of trucks, their load or unload time, and their ETA for their deliver or return time. The progress bars will indicate the current time progress to the ETA.

The progress bar will begin to bounce back in a different color after the ETA time has elapsed and the load is behind schedule. Progress bars and ETAs are based on real-time traffic information with truck-specific routing information.
